

Pure, fresh water right within your reach

Fill the container with water straight from the spring. The filter removes all impurities and adds minerals. The result is fresh, pure, pleasant-tasting water that gives you more energy.

Drink pure, fresh water regularly throughout your day and you will soon notice the difference.

This is how our 5-layer water filter works

The filter removes impurities by absorption – for example, organic matter, smells and flavours. The water's smell, flavour and healthiness are improved. The filter adds vital minerals to the water and increases its oxygen content.

1. **Active carbon** removes impurities by absorption, with the carbon filter picking up impurities in the water (e.g. organic matter, smells and flavourings). The smell, flavour and healthiness are improved.
2. **Mineral stones** add vital minerals to the stones and adjust its pH.
3. **Silicium** removes impurities.
4. **Mineral balls** add minerals and increase the oxygen content. This gives the water added energy.
5. **A ceramic filter** removes any remaining impurities.
6. **A porous ceramic filter** concludes the final purification.

It is recommended that the filter is changed every 6 months.

TECHNICAL DATA:

Water filter

Removes 90% of lead content

Removes 93% of copper

Removes 93% of mercury

Removes 98% of chlorine

Softens water without salts

Reduces aluminium

Removes smells

Prevents bacteria

Removes impure particles

Improves the taste
